DETAILED ACTION

1. Applicant's response filed 4/14/05 has been received and considered.
2. A call was made to Douglas Erickson on 6/9/05 requesting cancellation of claim 25, the only rejected claim in the file, however applicants declined.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claim 25 rejected under 35 U.S.C. 103(a) as being unpatentable over Bieber.

Regarding claim 25 these limitations are considered simply to be an obvious variation of the method of determining the temperature of a coil of a shock absorbing device as disclosed in col 4 and claims 1 and 2. Note the conductor at 72. Simply "compensating" for the resistance of the conductor is, presumably, inherent in the

calculation method used by Bieber or would have been obvious to obtain a more precise measurement. Please note the current of the coil is used in the calculation of the coil temperature. Since current flows through the resistor 72 to get to the coil, then the resistance of the conductor would be taken into account here. Applicant's method is considered to simply amount to an obvious variation to that of Beiber.

Response to Arguments

6. Applicant's arguments filed 4/14/05 have been fully considered but they are not persuasive. The position of the examiner is believed to be explained above.

Allowable Subject Matter

7. Claims 1-24,26-36 are allowed.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The reference to Voss is relied upon for a discussion that current and voltage values fluctuate with temperature changes and that conductor is taken into account in the voltage sensing circuit connected across a battery. See at least col. 3 lines 50-60.

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
